

Quick Reference Coding Guide

The Biologics License Application for ALPROLIX has been transferred from Biogen to Bioverativ and, while most changes are aesthetic in nature (eg, new corporate logos and colors), NDC numbers are affected by the transfer. Updated NDCs will be released on a rolling schedule throughout 2018 and Bioverativ will communicate these changes prior to each release. ICD-10 codes, J-codes, and CPT codes remain the same.

This guide provides the correct codes to help you with accurate billing and coding for reimbursement during this transition.

ALPROLIX NATIONAL DRUG CODES (NDC)^{1,a}

Component	Biogen NDC	Bioverativ NDC
250 IU carton and case	64406-966-01	71104-966-01
250 IU vial label	64406-952-01	71104-952-01
500 IU carton and case	64406-911-01	71104-911-01
500 IU vial label	64406-953-09	71104-953-09
1000 IU carton and case	64406-922-01	71104-922-01
1000 IU vial label	64406-954-09	71104-954-09
2000 IU carton and case	64406-933-01	71104-933-01
2000 IU vial label	64406-955-09	71104-955-09
3000 IU carton and case	64406-944-01	71104-944-01
3000 IU vial label	64406-956-09	71104-956-09
4000 IU carton and case	64406-977-01	71104-977-01
4000 IU vial label	64406-951-09	71104-951-09
Diluent Label	64406-045-01	71104-045-01

^aMedicaid programs require the NDC to be used in addition to the HCPCS code for all drugs classified as “physician-administered drug.” In some states, this includes specialty drugs, such as factor products that are self-administered in the home.

CPT, Current Procedural Terminology; HCPCS, Healthcare Common Procedure Coding System; ICD-10, International Classification of Diseases, Tenth Revision; NDC, National Drug Code.

64406 → 71104

Only the first 5 digits changed from a Biogen number to a Bioverativ number

Billing and Coding

Diagnosis: Hemophilia B (Factor IX Disorder)²

Type	Code	Description
ICD-10-CM diagnosis code	D67	Hereditary factor IX deficiency

Healthcare Common Procedure Coding System (HCPCS) Reimbursement Code³

Provider	Code	Description
Physician office or home care pharmacy	J7201	Injection, factor IX, Fc fusion protein (recombinant), per IU

Infusion/Drug Administration Codes^{4,5}

CPT code	Setting	Description
96374	Physician/outpatient	Intravenous push, single or initial substance/drug
96375	Physician/outpatient	Each additional sequential intravenous push of a new substance/drug
99601	Home nurse visit	Home infusion/specialty drug administration, per visit (up to 2 hours)
99602	Home nurse visit	Home infusion/specialty drug administration, each additional hour (list separately in addition to primary procedure)

HCPCS Level II code	Setting	Description
S9345 ^a	Home care	Home infusion therapy, antihemophilic agent infusion therapy (eg, FIX); administrative services, professional pharmacy services, care coordination, and all necessary supplies and equipment (drugs and nursing visits coded separately), per diem

^aHCPCS Code S9345 should only be billed with CPT Code 99601.

Hospital Revenue Code⁶

Provider	Code	Description
Hospital	0636	Pharmacy, drugs requiring detailed coding

Tips for Accurate Billing

Coding for ALPROLIX is based upon the NDC number associated with the manufacturer

NDC numbers for ALPROLIX will depend on the packaging label

Only the first 5 digits will change from a Biogen number to a Bioverativ number (eg, 64406-922-01 to 71104-922-01)¹

In order to ensure the right code is used, copy the NDC on the packaging label when coding for ALPROLIX

Please refer to the changes on the packaging highlighted below to guide you through the billing process.

Manufacturer logo

Please see last page for Indications, Important Safety Information, and [Full Prescribing Information](#).

 **ALPROLIX®**
[Coagulation Factor IX
(Recombinant), Fc Fusion Protein]

Indications and Important Safety Information

INDICATIONS: ALPROLIX® [Coagulation Factor IX (Recombinant), Fc Fusion Protein] is a recombinant DNA derived, coagulation Factor IX concentrate indicated for adults and children with hemophilia B for:

- On-demand treatment and control of bleeding episodes
- Perioperative management of bleeding
- Routine prophylaxis to reduce the frequency of bleeding episodes

Limitation of Use

ALPROLIX is not indicated for induction of immune tolerance in patients with hemophilia B.

CONTRAINDICATIONS: ALPROLIX is contraindicated in patients who have a known history of hypersensitivity reactions, including anaphylaxis, to the product or its excipients.

WARNINGS AND PRECAUTIONS: Hypersensitivity reactions have been reported with ALPROLIX. Allergic-type hypersensitivity reactions, including anaphylaxis, have been reported with Factor IX replacement products. Discontinue use of ALPROLIX if hypersensitivity symptoms occur, and initiate appropriate treatment.

Formation of neutralizing antibodies (inhibitors) to Factor IX has been reported following administration of ALPROLIX, including in previously untreated patients. Patients using ALPROLIX should be monitored for the development of Factor IX inhibitors. Clotting assays (e.g., one-stage) may be used to confirm that adequate Factor VIII levels have been achieved and maintained.

The use of Factor IX products has been associated with the development of thromboembolic complications.

ADVERSE REACTIONS: Common adverse reactions (incidence $\geq 1\%$) observed in clinical trials were headache, oral paresthesia, and obstructive uropathy.
